

AZ-104: Microsoft Azure Administrator - Main Topics

1. Manage Azure identities and governance

- Manage Azure AD objects (users, groups, and devices)
- Manage role-based access control (RBAC)
- Manage subscriptions and governance (Azure Policy, Blueprints)

2. Implement and manage storage

- Configure storage accounts
- Manage data in Azure Storage
- Configure Azure files and Azure Blob Storage
- Configure storage security and replication

3. Deploy and manage Azure compute resources

- Configure virtual machines (VMs) for performance, availability, and scaling
- Automate deployment using templates (ARM)
- Create and configure containers and Azure App Services
- Configure Azure Kubernetes Service (AKS)

4. Configure and manage virtual networking

- Configure virtual networks (VNETs), subnets, and IP addressing
- Configure network security groups (NSGs) and firewalls
- Configure private and public DNS zones
- Configure Azure VPN Gateway, ExpressRoute, and VNet Peering

5. Monitor and maintain Azure resources

- Configure Azure Monitor, Log Analytics, and alerts
- Implement backup and recovery
- Perform updates and patch management
- Use Azure Resource Manager (ARM) for automation

6. Manage governance and compliance

- Manage resource locks and tags
- Implement Azure Policy and role-based access control (RBAC)
- Review compliance using Microsoft Defender for Cloud
